

# Peace, Love and Unification in /boot

Kay Sievers  
Harald Hoyer

Red Hat

/boot belongs to the machine

/boot shared by all installations

No need to modify files or install bootloaders

```
/boot
|-- loader
|   |-- loader.conf
|   |-- entries
|       |-- custom-kernel.conf
|       |-- debian-2.6.32-5-amd64.conf

```

Menu entries should be presented in reverse  
version-sort order to the user.

Fedora 17 3.3.7-3.fc17.x86\_64

Fedora 17 3.3.7-1.fc17.x86\_64

Fedora 16

Packages should not install to /boot

/boot should be ~1-2 GB big.

If no timeout is set for the loader, the bootloader boots the default entry.

If a key is pressed, a menu is shown.

gummiboot

# Discussion

- /etc/loader.conf needed?
- append machine-id to all files copied to /boot
- include (pretty) host name in the menu entry
- Comments?
